

University of Salento — Department of Engineering for Innovation

Anonymous consultation of planning experts

Choosing a schedule when durations are uncertain

Booklet code: **P01**

How to fill in (read before starting)
Fill in this file directly in Word. To answer, click the boxes ☐ : they become ☒ . Click again to undo. You will hardly need to type anything.
Set aside about 60 minutes without interruptions . Read calmly: some questions check that the numbers in the tables have been read. Do not go back to change parts you have already completed.
The booklet is anonymous : do not write your name, company or any detail that could identify you. When finished, save it and upload it to the COMPLETED folder with the same file name , as described in the instructions.
If a box does not respond to clicks (older Word versions or other programs), type an X right after the chosen box.

☒ **I have read the information sheet, I take part voluntarily and I agree that my anonymous answers may be used in aggregate form for research purposes.**

Start time: (the end time is entered on the last page)

Please note your booklet code (P01) privately: you will need it only if we post a clarification question for this booklet.

Part 0 — About you (optional)

The categories are deliberately broad. You may skip any question.

Main area of your planning work

- ☒ field service / technical assistance ☐ distribution / transport
☐ other ☐ prefer not to say

Years of experience in operational planning

- ☐ up to 5 ☒ more than 5 ☐ prefer not to say

Do you use tools that compare several options (scenarios, multi-criteria dashboards)?

- ☒ never ☐ sometimes ☐ often ☐ prefer not to say

Part 1 — How to read the sheets (guided example)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	"1-in-20 day" cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
N (standard)	5	728	849	987	1,058	91	23.7	100%	+62%
A	6	750	818	907	962	56	8.0	70%	+54%
B	6	750	818	905	951	54	8.3	70%	+54%
C	7	790	837	896	923	39	0.3	10%	+38%
D	8	830	877	935	963	38	0.0	0%	+25%
E	9	870	917	975	1,003	38	0.0	0%	+24%

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	A	A	A	A	B	B	C	C	C

Column	Meaning
N (standard)	The schedule recommended by the traditional method: the cheapest on a typical day, but it ignores difficult days.
Typical-day cost	Cost if every work order lasts exactly as planned.
Average cost (40 days)	Average cost over the 40 simulated days.
Average cost of the 12 worst days	Average of the 12 most expensive days out of 40 (the worst 30%).
"1-in-20 day" cost	Cost exceeded on only about one day in twenty.
Day-to-day variability	How far, on average, the cost of a day departs from the average cost. Low = predictable days. It does not tell whether technicians have equal workloads.
Overtime of the most loaded technician	Average overtime, in t.u., of the technician who works the most overtime on each day.
Days with overtime	Share of days on which at least one technician exceeds the shift.
Cost increase under extreme conditions	How much the average cost rises on 12 days much less favourable than the simulated ones.
Risk selector θ	<u>Low values: average cost matters most. High values: avoiding the worst days matters most.</u> For each value the system shows the option it would recommend.

Reading example: option C uses 7 technicians (one more than A and B). Compared with N it costs 62 c.u. more on a typical day but 135 c.u. less on a "1-in-20 day"; the overtime of the most loaded technician falls from 23.7 to 0.3 t.u. With the selector between 0.7 and 0.9 the system recommends C; between 0.1 and 0.4 it recommends A.

Part 2 — Comprehension check (on the example on the previous page)

You may look at the example table again. Answer before turning the page.

Q1. Which column gives the cost of a difficult day that occurs about once every twenty days?

- ☐ Average cost ☒ “1-in-20 day” cost
☐ Day-to-day variability ☐ Typical-day cost

Q2. Which option has the lowest typical-day cost?

- ☒ N ☐ A ☐ B ☐ C ☐ D ☐ E

Q3. With the selector at 0.5, which option is recommended?

- ☐ A ☒ B ☐ C ☐ D ☐ E

Q4. Does low day-to-day variability mean that technicians have equal workloads?

- ☐ Yes ☒ No ☐ The table does not say

Q5. Compared with N, how does option C perform on a “1-in-20 day”?

- ☐ it costs more ☒ it costs less ☐ same cost

Solutions to Part 2 (read after answering; do not change your answers)

- Q1: “1-in-20 day” cost — the cost exceeded on only about one day in twenty.
- Q2: N — the standard recommendation is the cheapest on a typical day (728 c.u.).
- Q3: B — in the selector row, B appears under 0.5.
- Q4: No — variability refers to days, not to how work is shared among technicians.
- Q5: it costs less — 923 c.u. versus 1,058 c.u.

If you got an answer wrong, reread the corresponding row of Part 1 before continuing.

Part 3 — Your priorities

Distribute **exactly 10 tokens** among the three criteria by clicking one box per token. More tokens = more important to you when you plan a day.

Criterion	Tokens (click)
Average daily cost (column “Average cost”)	☒ ☒ ☒ ☒ ☐ ☐ ☐ ☐ ☐ ☐
Containing difficult days (columns “12 worst days” and “1-in-20 day”)	☒ ☒ ☒ ☒ ☐ ☐ ☐ ☐ ☐ ☐
Predictable days (column “Day-to-day variability”)	☒ ☒ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐

Which description fits you best? (one only)

- ☐ Budget-driven: average cost matters; the rest is secondary.
- ☒ Balanced: average cost and difficult days matter equally.
- ☐ Service level: avoiding difficult days comes before cost.
- ☐ Overtime-averse: avoid overtime and difficult days, with an eye on cost.
- ☐ Predictable days: above all I want predictable days.
- ☐ Worst case: I must protect myself against the worst days (contractual or regulatory constraints).
- ☐ None of these.

Case 1 — Tomorrow's schedule (single recommendation)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	"1-in-20 day" cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
Recommendation	5	702	840	998	1,058	107	20.4	95%	+76%

Reading check

R1. How many technicians does the recommendation use?

☐ 4 ☒ 5 ☐ 6 ☐ 7

R2. What is the cost of a "1-in-20 day" (c.u.)?

☐ 702 ☒ 998 ☐ 840 ☐ 1,058

R3. By how much does the average cost increase under extreme conditions?

☒ +76% ☐ +20% ☐ +95% ☐ +51%

D4. Which column weighed most in your decision? (one only)

☐ Technicians ☐ Typical-day cost
☐ Average cost (40 days) ☐ Average cost of the 12 worst days
☐ "1-in-20 day" cost ☐ Day-to-day variability
☐ Overtime of the most loaded technician (t.u.) ☐ Days with overtime
☒ Cost increase under extreme conditions

Your decision

D1. Would you adopt this schedule for tomorrow?

☐ Yes ☐ Yes, but I would like to see alternatives ☒ No

D2. How likely is it that tomorrow's budget will be exceeded?

very unlikely ☐ 1 ☒ 2 ☐ 3 ☐ 4 ☐ 5 very likely

D3. Main reasons for your answer (at most 2)

☐ lowest typical-day cost ☐ lowest average cost ☐ cheaper worst days
☐ lower day-to-day variability ☒ fewer technicians ☐ less overtime for the most loaded technician
☐ better under extreme conditions ☐ other

D5. How confident are you in your decision?

not at all ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☒ 5 ☐ 6 ☐ 7 completely

Case 2 — Tomorrow's schedule (single recommendation)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	"1-in-20 day" cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
Recommendation	6	787	911	1,050	1,090	97	19.9	82%	+70%

Reading check

R1. How many technicians does the recommendation use?

☐ 5 ☒ 6 ☐ 7 ☐ 8

R2. What is the cost of a "1-in-20 day" (c.u.)?

☐ 911 ☐ 1,090 ☒ 1,050 ☐ 787

R3. By how much does the average cost increase under extreme conditions?

☐ +16% ☐ +39% ☐ +82% ☒ +70%

D4. Which column weighed most in your decision? (one only)

☐ Technicians ☐ Typical-day cost
☐ Average cost (40 days) ☐ Average cost of the 12 worst days
☐ "1-in-20 day" cost ☐ Day-to-day variability
☐ Overtime of the most loaded technician (t.u.) ☐ Days with overtime
☒ Cost increase under extreme conditions

Your decision

D1. Would you adopt this schedule for tomorrow?

☐ Yes ☒ Yes, but I would like to see alternatives ☐ No

D2. How likely is it that tomorrow's budget will be exceeded?

very unlikely ☐ 1 ☐ 2 ☒ 3 ☐ 4 ☐ 5 very likely

D3. Main reasons for your answer (at most 2)

☐ lowest typical-day cost ☐ lowest average cost ☐ cheaper worst days
☒ lower day-to-day variability ☐ fewer technicians ☐ less overtime for the most loaded technician
☐ better under extreme conditions ☐ other

D5. How confident are you in your decision?

not at all ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☒ 5 ☐ 6 ☐ 7 completely

Case 3 — Tomorrow's schedule (several options and selector)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	"1-in-20 day" cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
N (standard)	6	796	951	1,127	1,196	121	20.4	85%	+79%
A	7	836	928	1,049	1,117	79	5.9	55%	+72%
B	8	876	951	1,039	1,088	61	1.1	15%	+56%
C	9	916	988	1,072	1,105	59	0.0	2%	+40%
D	10	956	1,028	1,112	1,142	59	0.0	0%	+37%
E	11	996	1,068	1,152	1,182	59	0.0	0%	+31%

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	A	A	A	A	A	A	B	B	B

Reading check

R1. Which option has the lowest "1-in-20 day" cost?

☐ N ☐ A ☒ B ☐ C ☐ D ☐ E

R2. With the selector set to 0.7, which option is recommended?

☐ A ☒ B ☐ C ☐ D ☐ E

R3. How many technicians does the option with the lowest average cost use?

☐ 6 ☒ 7 ☐ 8 ☐ 9

D4. Which column weighed most in your decision? (one only)

☐ Technicians ☐ Typical-day cost
☒ Average cost (40 days) ☐ Average cost of the 12 worst days
☐ "1-in-20 day" cost ☐ Day-to-day variability
☐ Overtime of the most loaded technician (t.u.) ☐ Days with overtime
☐ Cost increase under extreme conditions ☐ selector row

Your decision

D1. Which option would you adopt for tomorrow? (one only)

☐ N ☒ A ☐ B ☐ C ☐ D ☐ E

D2. If you used the selector, which value would you set?

☐ 0.1 ☐ 0.2 ☐ 0.3 ☐ 0.4 ☒ 0.5 ☐ 0.6 ☐ 0.7 ☐ 0.8 ☐ 0.9 ☐ I would not use it

D3. Main reasons for your choice (at most 2)

☐ lowest typical-day cost ☒ lowest average cost ☐ cheaper worst days
☐ lower day-to-day variability ☐ fewer technicians ☐ less overtime for the most loaded technician
☒ better under extreme conditions ☐ I followed the selector ☐ other

D5. How confident are you in your decision?

not at all ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☒ 6 ☐ 7 completely

Case 4 — Tomorrow's schedule (several options and selector)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	"1-in-20 day" cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
N (standard)	6	780	926	1,076	1,121	99	22.2	88%	+68%
A	6	780	880	1,017	1,059	84	11.3	78%	+72%
B	6	780	884	1,016	1,059	83	12.6	80%	+72%
C	7	820	886	968	991	53	3.0	35%	+59%
D	8	860	919	987	1,008	47	0.5	15%	+42%
E	9	900	958	1,025	1,048	46	0.0	0%	+31%

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	A	A	A	C	C	C	C	C	C

Reading check

R1. Which option has the lowest "1-in-20 day" cost?

☐ N ☐ A ☐ B ☒ C ☐ D ☐ E

R2. With the selector set to 0.7, which option is recommended?

☐ A ☐ B ☒ C ☐ D ☐ E

R3. How many technicians does the option with the lowest average cost use?

☐ 5 ☒ 6 ☐ 7 ☐ 8

D4. Which column weighed most in your decision? (one only)

☐ Technicians ☐ Typical-day cost
☒ Average cost (40 days) ☐ Average cost of the 12 worst days
☐ "1-in-20 day" cost ☐ Day-to-day variability
☐ Overtime of the most loaded technician (t.u.) ☐ Days with overtime
☐ Cost increase under extreme conditions ☐ selector row

Your decision

D1. Which option would you adopt for tomorrow? (one only)

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	R	R	R	R	R	R	T	T	T

Reading check

R1. Which option has the lowest "1-in-20 day" cost?

☐ N ☐ P ☐ Q ☐ R ☒ S ☐ T

R2. With the selector set to 0.7, which option is recommended?

☐ P ☐ Q ☐ R ☐ S ☒ T

R3. How many technicians does the option with the lowest average cost use?

☐ 6 ☒ 7 ☐ 8 ☐ 9

D4. Which column weighed most in your decision? (one only)

☐ Technicians ☐ Typical-day cost
☒ Average cost (40 days) ☐ Average cost of the 12 worst days
☐ "1-in-20 day" cost ☐ Day-to-day variability
☐ Overtime of the most loaded technician (t.u.) ☐ Days with overtime
☐ Cost increase under extreme conditions ☐ selector row

Your decision

D1. Which option would you adopt for tomorrow? (one only)

☐ N ☐ P ☐ Q ☐ R ☐ S ☒ T

D2. If you used the selector, which value would you set?

☐ 0.1 ☐ 0.2 ☐ 0.3 ☐ 0.4 ☐ 0.5 ☐ 0.6 ☒ 0.7 ☐ 0.8 ☐ 0.9 ☐ I would not use it

D3. Main reasons for your choice (at most 2)

☐ lowest typical-day cost ☒ lowest average cost ☐ cheaper worst days
☒ lower day-to-day variability ☐ fewer technicians ☐ less overtime for the most loaded technician
☐ better under extreme conditions ☐ I followed the selector ☐ other

D5. How confident are you in your decision?

not at all ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☒ 6 ☐ 7 completely

Part 5.1 — Two ways of presenting the options (table and selector only)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	“1-in-20 day” cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
N (standard)	5	751	882	1,070	1,131	123	23.9	95%	+73%
A	6	761	837	968	1,024	83	7.9	65%	+69%
B	7	801	853	940	966	56	1.8	30%	+53%
C	8	841	889	968	992	52	0.0	0%	+37%
D	9	881	929	1,008	1,032	52	0.0	0%	+31%

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	A	A	A	A	A	B	B	B	B

V1.1. With the selector at 0.8, how much higher is the typical-day cost than N?

☐ less than 20 c.u. ☒ 20–60 c.u. ☐ 60–100 c.u. ☐ more than 100 c.u.

V1.2. With the selector at 0.8, how much lower is the “1-in-20 day” cost than N?

☐ less than 50 c.u. ☒ 50–100 c.u. ☐ 100–200 c.u. ☐ more than 200 c.u.

V1.3. How easy was it to answer with this presentation?

very difficult ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☒ 5 very easy

Part 5.2 — Two ways of presenting the options (table, selector and summary)

40 work orders must be assigned to technicians for tomorrow. Regular shift: 100 time units (t.u.) per technician. Each activated technician costs 40 cost units (c.u.); each t.u. of work costs 1 c.u.; each t.u. of overtime costs an extra 1.5 c.u. Work-order durations are uncertain and vary by zone: every option was simulated on 40 plausible days plus 12 extreme days.

Option	Technicians	Typical-day cost	Average cost (40 days)	Average cost of the 12 worst days	“1-in-20 day” cost	Day-to-day variability	Overtime of the most loaded technician (t.u.)	Days with overtime	Cost increase under extreme conditions
N (standard)	6	767	888	1,035	1,063	106	15.9	88%	+63%
A	6	767	850	965	988	81	9.0	62%	+64%
B	7	807	861	936	941	54	0.8	20%	+49%
C	8	847	898	969	979	52	0.0	2%	+33%
D	9	887	938	1,008	1,019	52	0.0	0%	+27%

Risk selector θ	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9
Recommended option	A	A	A	A	B	B	B	B	B

Automatic summary. With the selector at 0.8 the system recommends option B: 7 technicians instead of the 6 of the standard recommendation N. On a typical day it costs 40 c.u. more (5%); on a “1-in-20 day” it costs 122 c.u. less (12%). The average overtime of the most loaded technician falls from 15.9 to 0.8 t.u. and the share of days with overtime from 88% to 20%. Day-to-day variability falls from 106 to 54: days become more predictable, which does not mean equal workloads across technicians.

V2.1. With the selector at 0.8, how much higher is the typical-day cost than N?

☐ less than 20 c.u. ☒ 20–60 c.u. ☐ 60–100 c.u. ☐ more than 100 c.u.

V2.2. With the selector at 0.8, how much lower is the “1-in-20 day” cost than N?

☐ less than 50 c.u. ☒ 50–100 c.u. ☐ 100–200 c.u. ☐ more than 200 c.u.

V2.3. How easy was it to answer with this presentation?

very difficult ☐ 1 ☐ 2 ☐ 3 ☐ 4 ☒ 5 very easy

Part 6 — Final questionnaire

Think of the presentation with several options and the risk selector. 1 = strongly disagree, 5 = strongly agree.

	Statement	1	2	3	4	5
S1	I think that I would like to use this tool frequently.	☐	☐	☐	☒	☐
S2	I found the tool unnecessarily complex.	☐	☒	☐	☐	☐
S3	I thought the tool was easy to use.	☐	☐	☐	☒	☐
S4	I think that I would need the support of a technical person to be able to use this tool.	☐	☐	☒	☐	☐
S5	I found the various functions in this tool were well integrated.	☐	☐	☒	☐	☐
S6	I thought there was too much inconsistency in this tool.	☐	☒	☐	☐	☐
S7	I would imagine that most people would learn to use this tool very quickly.	☐	☐	☒	☐	☐
S8	I found the tool very cumbersome to use.	☐	☐	☒	☐	☐
S9	I felt very confident using the tool.	☐	☐	☐	☒	☐
S10	I needed to learn a lot of things before I could get going with this tool.	☐	☐	☒	☐	☐
G1	I understood what the risk selector does.	☐	☐	☐	☐	☒
G2	The table contains the information I actually use to decide.	☐	☐	☐	☒	☐
G3	Having several options helped me more than it confused me.	☐	☐	☒	☐	☐
G4	To check attention, please click box 4 in this row.	☐	☐	☐	☒	☐
G5	I would trust these numbers if they were computed on my company's data.	☐	☐	☐	☒	☐
G6	I would rather receive a single recommendation.	☐	☐	☒	☐	☐
G7	The written summary (Part 5) helped me understand the differences between the options.	☐	☐	☒	☐	☐

F1. How much extra time would you spend on a daily decision to have several options?

☐ none ☐ up to 1 minute ☐ 1–3 minutes ☒ 3–5 minutes ☐ more than 5 minutes

F2. What else would you like to see? (several answers allowed)

☒ workload of each technician ☐ map of the zones ☐ comparison with real past days
☐ automatic written explanation ☐ nothing ☐ other

F3. (Optional) A one-line comment:

End time: ...

Thank you. Save the file and upload it to the COMPLETED folder with the same file name.
